Hello friends, it's me, Echo! Artie is showing me how to check my heart rate. Heart rate, or pulse, is the number of times our heart beats per minute. Our heart rates go up when we do physical activity, like when we are running and dancing. Our heart rates go down when we are at rest, like when we are sleeping and sitting. Measuring heart rate is simple! We can feel our pulse in areas where our arteries pass close to our skin. That includes places like our neck and wrists.
